

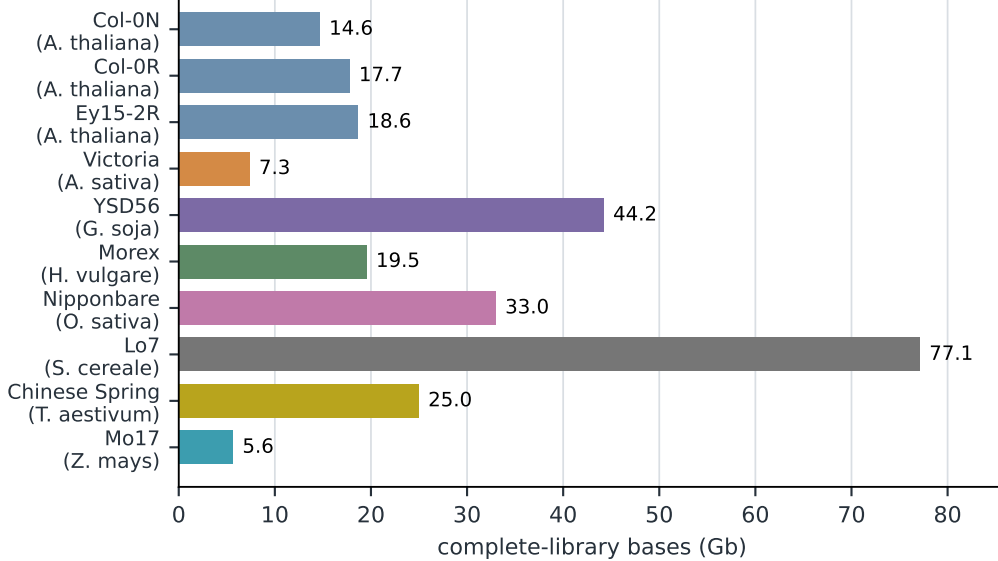

# Figure 3 | TandemX operates across diverse plant long-read datasets

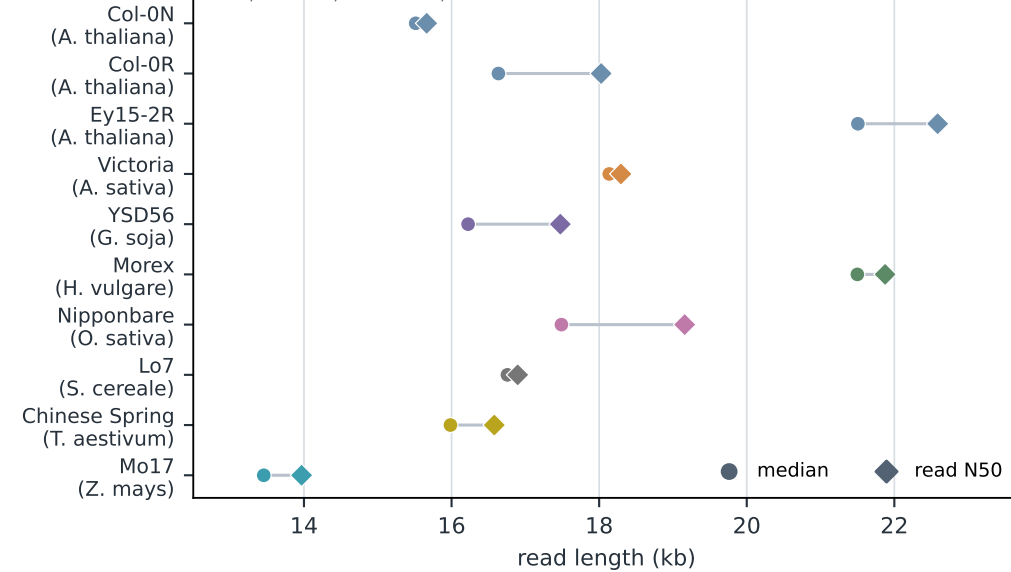

## A Ten complete public HiFi libraries

Eight reported species; all files passed integrity and FASTQ checks

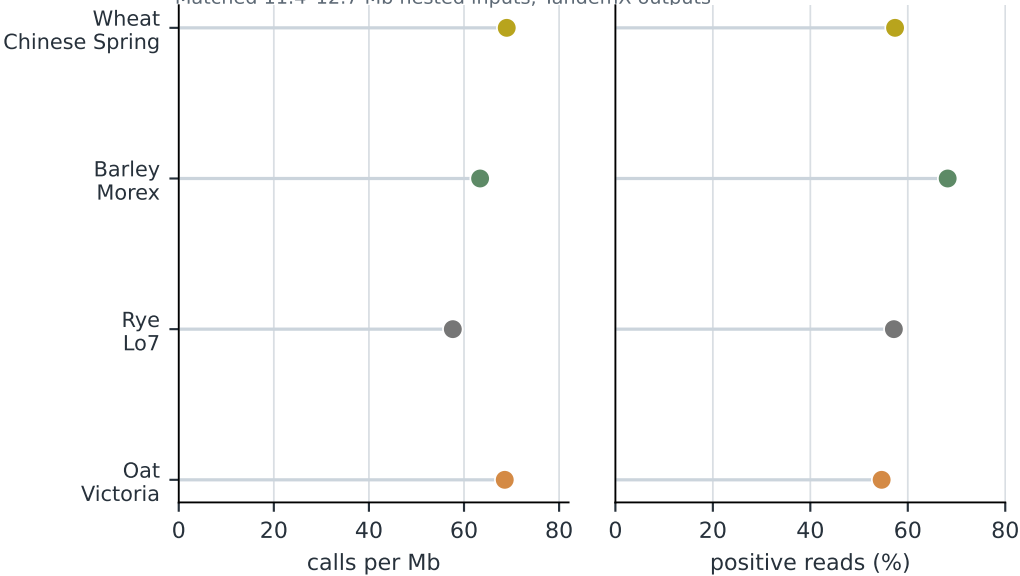

## B Read-length range

Circles, median; diamonds, read N50

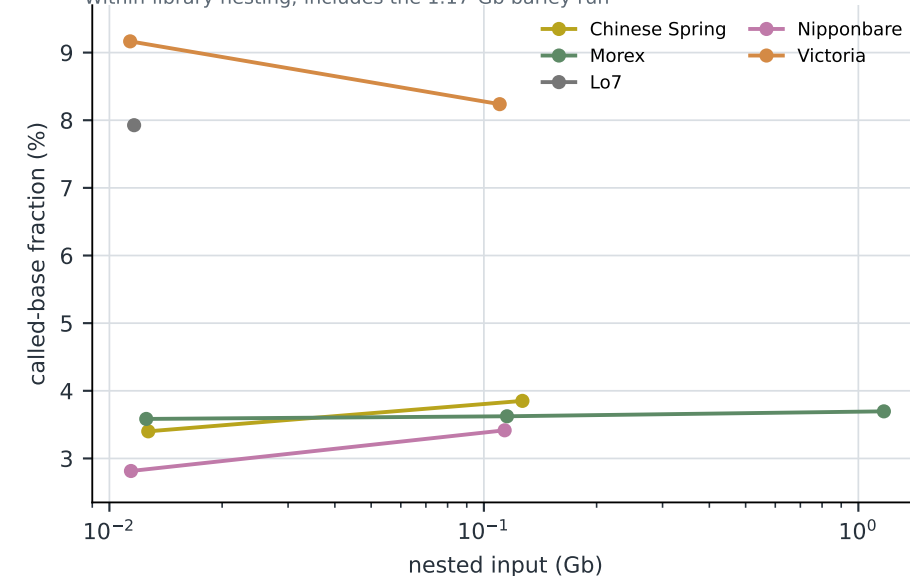

## C Observed repeat-call landscape

Matched 11.4-12.7 Mb nested inputs; TandemX outputs

## D Called repeat-base fraction across nested inputs

Within-library nesting; includes the 1.17-Gb barley run

Complete libraries establish the input range. Nested runs are descriptive operating data, not cross-species accuracy estimates or biological replicates.
